

Maxprog Releases iCash 7.5.9 - Personal Finance Software for macOS and MS Windows

Maxprog is proud to present a new release of iCash personal finance software, new version 7.5.9, available now in English, German, French, Swedish, Italian, Dutch, Russian, Spanish, Portuguese, Japanese, Chinese and Korean on Maxprog website with a lot of new features and improvements.

([PRWEB](#)) October 17, 2016 -- Maxprog's iCash (<http://icash.maxprog.com>) is a \$49 personal finance software and money manager for macOS and MS Windows designed to track incomes, expenses, credits, debts and banks transactions. It offers unlimited categories, multiple accounts creation, multiple currencies, a SQL back-end engine, password protection, export/import routines, search functions, charts, budgeting, and drag & drop support.

iCash is available in English, German, French, Swedish, Italian, Dutch, Russian, Spanish, Portuguese, Japanese, Chinese and Korean.

iCash can serve several small accounting needs for private users, clubs, associations, the self-employed, small businesses, or even home use, making keeping track of incomes, expenses and bank transactions a snap. No need to know about accounting or even care about it.

iCash is versatile and user-friendly. For this reason it doesn't use the principle of double-entry bookkeeping making it much easier to be used by people with very little or no accounting knowledge at all. iCash shows where money comes from and where it goes. All accounts are well organized according to user-defined categories and built-in types, so reports can be tailored to include all records or only ones meeting specified criteria. iCash is a document based application.
